[TECHNICAL TROUBLESHOOTING STEP-BY-STEP]

Scenario A: Hardware Connection Drop

1. Check the local network terminal node connectivity.

2. If the exterior cable infrastructure is physically damaged by on-site construction equipment, mark the ticket status as "Escalated to Field Infrastructure Engineering".

3. Do not attempt a digital remote reset if physical fiber lines are severed.

Scenario B: Server Internal Handshake Failure (Error 500)

1. Verify if the database pool size has exceeded 100 concurrent connections.

2. If pool size is full, flush the local database memory cache.
